EDUCATION

University of Colorado Boulder

Expected: May 2027

B.S. Computer Science, Minor in Business | **Major GPA: 3.73 / 4.00**

Boulder, CO

WORK EXPERIENCE

Apple

May 2026 – Aug 2026

Software Engineer Intern

San Diego, CA

- Built an agentic system that autonomously generates, runs, and repairs XCTestes from manual test plans until they pass, across iOS, macOS, and watchOS, cutting each plan from **weeks to hours**.
- Designed a distributed execution layer that shards a test plan across **50+ devices** and coordinates multi-device Mac-iPhone parent-and-child flows, cutting a full run from **hours to minutes**.
- Shipped **200+ generated cases** into Screen Time's regression suite, covering feature areas with no prior automation and cutting each manual pass from a full-time engineer to **~30 min** of triage.
- Implemented a persistent knowledge layer that reuses verified UI hierarchies and captures step-level failure traces; merged into the team's daily automation and adopted by **5+ engineers**.

University of Colorado Boulder – Genetic Logic Lab

May 2025 – Present

Undergraduate Researcher

Boulder, CO

- Lead full-stack dev on **SeqImprove**, an **AI-assisted synthetic-bio** curation tool adopted by **3 research labs**.
- Designed and implemented a multi-algorithm sequence hashing system, reducing annotation time by **75%**.
- Engineered backend APIs and data models to support cross-platform integration of biological sequence workflows.

IM – AI Messaging Platform

Oct 2025 – Mar 2026

Founding Software Engineer

Boulder, CO

- Designed and shipped a real-time conversational backend handling **5,000+ sessions** with sub-second responses.
- Shipped ETL pipelines transforming unstructured conversation data into structured analytics datasets.
- Built the vector retrieval and Redis caching layer that let conversations resume with prior context, not cold.

Sorcea Labs

Sep 2025 – Dec 2025

Software Engineer Intern

Remote

- Built a serverless AWS pipeline processing **7M+ product reviews** with Lambda, S3, SageMaker & DynamoDB.
- Implemented CI/CD and Infrastructure-as-Code for automated deployments and improved production stability.
- Optimized AWS inference workflows, increasing throughput by **35%** while reducing latency and compute costs.

PROJECTS

Sift – Proactive AI assistant via iMessage | GitHub | *Python, FastAPI, PostgreSQL, Redis, React*

- Built and launched a proactive AI assistant that managed tasks, schedules, and email for **100+ students** and processed **5k+ messages/month** in production.
- Architected a modular backend coordinating 10 custom services for scheduling, email triage, task planning, and Canvas synchronization.
- Engineered Redis-backed automation infrastructure for concurrent jobs, external API calls, CI/CD, testing, and Sentry monitoring.

LEADERSHIP EXPERIENCE

Blueprint Boulder

Aug 2025 – May 2026

Software Engineer Team Lead

Boulder, CO

- Led a **6-person** team building scheduling and booking software serving **100+ special-needs families**.
- Owned client communication and sprint planning, translating client feedback into scoped specs the team shipped.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Swift, C++, SQL

AI/Backend: Claude Agent SDK, PyTorch, FastAPI, PostgreSQL, Redis, pgvector

Dev/Test Infra: SwiftUI, XCTest, Xcode, Docker, AWS (Lambda, S3, DynamoDB), CI/CD, Git, Sentry
